PROJECTS

ShareMe	<i>React.js, Redux, Sanity, Javascript , Sass , Git</i>	Source Code
<ul style="list-style-type: none">ShareMe was reactjs based project, which was build to have an open source social-media where a user can send and receive the images globally which can be saved by a user anonymously.Shareme uses the reactjs as the frontend and the backend was made with the sanity, which is called as schemaless backend that lets you store and query JSON documents. And subscribe to real-time changes.Deployed on Netlify		
Event-Organizer	<i>Node.js, Express, JavaScript, Git,MongoDb , CSS , Tailwind ,</i>	Source Code
<ul style="list-style-type: none">Event-Organizer was the project which was made for the event organiser where there are 3 types of roles which are as follow as teacher, admin and student/normal.In Event-Organizer student can add their data and register into the event which gets stored into the mongodb database.Teacher can see the winner and add events in the database , teacher can even see the number of registration as well as the number of events, number of students register..		
CustomOpenAi	<i>React.js, RestApis ,OpenAi platform , Javascript , Sass , Git</i>	Source Code
<ul style="list-style-type: none">OpenAi was reactjs based product instead for looking for everywhere user can visualize and gte there answer at one placeUsing OpenAi api, learnt alot how to use apis and how to fetch them in the database, using axios. Also while making this project get to know that, how chatgpt actually take data and how it's almost a openSource
